# Chapter 1

## Todo List

File [myfind.c](#)

Solve Path Problems for lstat

- Stop Recursion
- Find solution for passing arguments
- Concept for Syscalls/library functions for actions

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all documented files with brief descriptions:

<a href="#">myfind.c</a> . . . . .	5
------------------------------------	---

## Chapter 3

# File Documentation

### 3.1 myfind.c File Reference

```
#include <stdio.h>
#include <pwd.h>
#include <sys/types.h>
#include <sys/stat.h>
#include <errno.h>
#include <dirent.h>
#include <stdlib.h>
#include <unistd.h>
#include <string.h>
```

Include dependency graph for myfind.c:

### Functions

- void [do\\_file](#) (const char \*file\_name, const char \*const \*parms)  
*Check the given file.*
- void [do\\_dir](#) (const char \*dir\_name, const char \*const \*parms)  
*iterate over all files starting at current working directory*
- int [main](#) (int argc, const char \*const argv[])  
*Main entry point of program.*

### Variables

- int [parms\\_count](#)

#### 3.1.1 Detailed Description

Main module of myfind

**Author**

Alexander Pirka [alexander.pirka@technikum-wien.at](mailto:alexander.pirka@technikum-wien.at)

**Date**

2017/02/26

**Version**

\$Draft\$

**Todo**

- Solve Path Problems for lstat
- Stop Recursion
- Find solution for passing arguments
- Concept for Syscalls/library functions for actions

URL: \$HeadURL\$

Last Modified: \$Author\$

Definition in file [myfind.c](#).

### 3.1.2 Function Documentation

#### 3.1.2.1 void do\_dir ( const char \* *dir\_name*, const char \*const \* *parms* )

iterate over all files starting at current working directory

This function iterates over all files. Printf filename and passing each file of the the directory to do\_find

**Parameters**

<i>dir_name</i>	Name of directory. It should be called first with the current directory "."
<i>parms</i>	Pointer to the passed arguments

**Returns**

None

**Note**

\$Author\$ do not know how to handle recursion and pass correct path for do\_find

Definition at line 69 of file myfind.c.

References do\_file().

Referenced by do\_file(), and main().

#### 3.1.2.2 void do\_file ( const char \* *file\_name*, const char \*const \* *parms* )

Check the given file.

This function checks the given file with lstat

## Parameters

<i>file_name</i>	Name of the file (could be directory as well)
<i>parms</i>	Pointer to the passed arguments

## Returns

None

## Note

None

Definition at line 115 of file myfind.c.

References `do_dir()`.Referenced by `do_dir()`.3.1.2.3 `int main ( int argc, const char *const argv[] )`

Main entry point of program.

This function is the main entry point of the program.

## Parameters

<i>argc</i>	Number of command line arguments. (IN)
<i>argv</i>	Array of command line arguments. (IN)

## Returns

The function returns whether or not the program executed successfully.

## Return values

<i>0</i>	Successful program termination
<i>1</i>	Failed program termination

Definition at line 148 of file myfind.c.

References `do_dir()`, and `parms_count`.

## 3.1.3 Variable Documentation

3.1.3.1 `int parms_count`

Integer number of parameters

Definition at line 45 of file myfind.c.

Referenced by `main()`.
